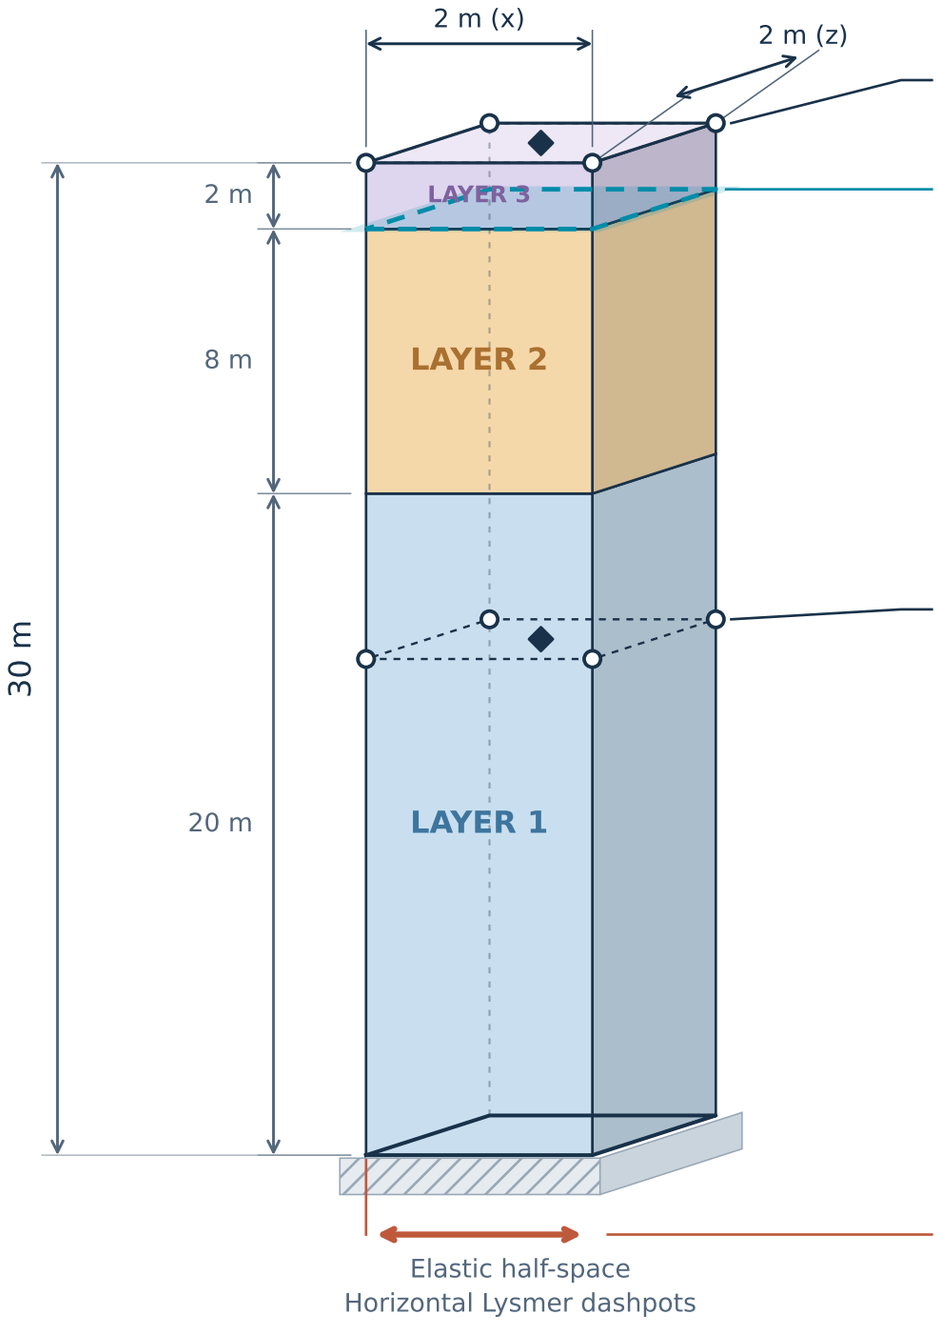
3D FREE-FIELD SOIL COLUMN

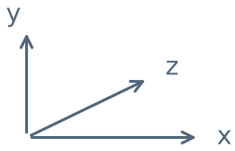
Three-dimensional model / 2 m × 2 m footprint / horizontal input along x



P2 Ground surface
y = 30 m · average of corner nodes 241-244

WATER TABLE
y = 28 m · 2 m below surface

P1 Mid-column
y = 15 m · average of corner nodes 121-124



HORIZONTAL MOTION INPUT
Base x direction: $F_x(t) = c\, v_{in}(t)$

Comparison histories: three displacement components and pore pressure.

Circles: four averaged corner nodes. Diamonds: comparison elevations. Horizontal dimensions exaggerated.
